

The Company

The CaptchaAd GmbH is a specialised marketer for interactive video advertising.

Right from the beginning, CaptchaAd was the first provider worldwide to combine conventional CAPTCHAs with high-quality video advertising. Due to an increasing demand for smarter advertising formats, CaptchaAd GmbH has developed an interactive advertising format that can be used independently from CAPTCHAs.

CaptchaAds can be integrated into processes where the users are already accustomed to interact. Thus this advertising format can be used both for security and for content monetisation.

The interaction with the advertising results in an extreme increase in effectiveness of the advertising message compared to other online advertising formats, and verifiably guarantees user awareness of the advertising message.

Commercial Spreadshirt.de 2012

As an innovative company, we work continuously on the further development of our portfolio, without losing sight of our core competence: creating value for the user, the publisher and the advertiser by offering an efficient advertising format.

Business Model

CaptchaAd offers advertisers a completely novel opportunity to perform brand and product communication efficiently and measurably. For website operators, CaptchaAd offers an additional way to generate revenue.

In this way CaptchaAd monetises further opportunities for interaction in a wide range of domains and creates marketable video reach without requiring the publisher to produce video content.

CaptchaAd has filed a patent application in the most important industrialized countries (including the USA, Europe and Asia).

What is a CaptchaAd?

CaptchaAd is an advertising format that either combines SPAM protection (CAPTCHA) with a video clip, or integrates these interactive video clips appropriately into other processes. At these points, we show a short video-commercial and ask a question on the content of the video.

The example upper right shows how a campaign of the customized clothing manufacturer "Spreadshirt" could look. In the input field below the video, the user has to enter the answer »Spreadshirt.de« to the displayed question. Different spellings, including the expected typing errors, can be entered as a correct answer. It is also possible to realise various different question-and-answer possibilities within one campaign.

CaptchaAd...

- ... is innovative, interactive Online Video Advertising
